

EETU SYLGREN

PROFILE

I graduated from my school with a GPA of 3.1 out of 5 the Summer of 2022 and then worked for a year at Nokia testing 5G software for base stations. I grew into my role in only a couple of months, and I really loved working with my team and the feeling of making a difference with my work. Unfortunately, I was let go in downsizing this Summer and am now looking for similar positions and I am also open to deepen my coding skills. I do problem solving for fun and in my free time I dabble in various forms of art, and I also like applying creativity to my work and I love writing.

WORK EXPERIENCE

2022 – 2023 Engineer, System Performance, Nokia Networks and Solutions

My job description included: designing tests based on test plans, running tests, applying test automation with Jenkins, writing result reports and fault reports, taking part in weekly meetings

EDUCATION

2016 – 2022 Bachelor, Engineer of Information Technology, Device and product Design, Oulu University of Applied Sciences

I got a good basic understanding of telecommunication networks, backend coding related to microcontrollers, and the basics of AI. I got good experience of working with people of different ways of working and have introduced some of the bigger group projects I've taken part in on my Finnish website.
